

ZONEWORKS®

Press Release

The Zoneworks® Door Blanket protects the integrity of temperature controlled items when powered doors on coolers and freezers unexpectedly go down

Zoneworks now offers the insulated, industrial Door Blanket – a quick and affordable way to protect temperature-controlled items and finished products from the threat of spoilage or irreparable damage that occurs when powered doors on coolers or freezers unexpectedly shut down.

The Zoneworks® Door Blanket is specifically designed to eliminate the exchange of air at the door opening when an air or automated door on a cooler or freezer won't close for any reason, including the loss of electrical power to the facility or another maintenance-related issue.

The industrial Door Blanket allows coolers and freezers to maintain consistent temperatures by virtue of its highly durable industrial fabric that surrounds multiple layers of recyclable, anti-microbial polyester batting. Custom-designed to fit each individual door opening, the industrial Door Blanket comes in a portable storage bag for ease of storage. Users can select from a wide selection of fabric colors. As with all Zoneworks products,

industry specialists are readily available to provide on-site design consultation and complete drawings, as well as turnkey project support and installation coordination.

About Zoneworks

Zoneworks is an industry leader in custom-designed fabric wall systems and other environmental zoning products for all types of space separation and environmental containment needs in industrial facilities. Systems can be designed for temperature separation, heat containment, industrial noise reduction, dust containment, odor or fume control, loading dock enclosure and temporary storage.

All Zoneworks products are designed and manufactured in the United States and meet standards of NFPA-701, ASTM-E-84, FMVSS 302 and CFM. For more information, please call 1-800-553-4834, or visit www.zoneworks.com.
