

ZONEWORKS®

Press Release

Zoneworks® Flexible Loading Dock Enclosures Allow Users to Save Energy and Boost Employee Comfort at the Dock Without the High Costs of Permanent Walls

Zoneworks® introduces the TZD line of flexible fabric curtain wall systems to enclose interior loading dock areas. The flexible industrial barriers substantially reduce facility energy costs and greatly enhance employee comfort at the loading dock without the need to build costly permanent walls, or rigid panelized systems.

Zoneworks thermal insulated curtain wall systems act as barriers to separate the inside dock from the rest of the facility, eliminating the need to heat or cool the expansive space accessed by trucks. The curtain walls stop the rapid influx of cold or hot air, as well as provide industrial humidity control, every time an exterior dock door is opened. The modular curtain wall system can also be used to completely enclose an open-air dock for better overall environmental control and energy savings.

Each Zoneworks dock system is custom-designed to address the unique environmental needs of the application. The systems incorporate the use of Zoneworks' TZ Series of thermal Insulated Curtain Walls, the only flexible fabric curtain walls capable of providing temperature separation up to 40°F (22°C). The modular wall panels are constructed of durable, fire-retardant vinyl surrounding multiple layers of recyclable, anti-microbial polyester batting, and are securely interconnected with Velcro®.

Heavy-duty sliding industrial curtains provide access to individual dock stations. The curtains can be easily opened and closed via a track and trolley system built into the top of the system's doorframe. These thermal industrial curtains are typically anchored to the dock surface with sturdy drop pins that easily slide in and out of position.

The system's stationary curtain walls can be affixed to existing building structures (such as ceiling joists), or custom metal frameworks can be constructed. Custom engineering ensures a proper fit around corners and any obstructions. Zoneworks industry specialists also provide on-site design consultation and complete drawings, as well as turnkey project support, including installation coordination if needed.

About Zoneworks

Zoneworks is a sister company to Frommelt Products Corporation, an industry leader in the design and manufacture of environmental control solutions at the loading dock. Zoneworks specializes in flexible industrial barriers for a wide variety of large space separation, and zoning and containment needs in industrial and commercial facilities. Zoneworks curtain walls are available for temperature separation, industrial humidity control, heat containment, odor and fume control, dust containment, industrial noise reduction and other environmental control needs.

All Zoneworks products are designed and manufactured in the United States and meet NFPA-701 flame resistance standards. For more information, please call 1-800-553-4834, or visit www.zoneworks.com.
